

Jennings Tire

Murfreesboro, Tennessee

Jennings Tire needed a new central office and service and distribution facility - and it had to be kind of special. Jennings Tire works on tires, all sizes. But they specialize in the big ones - selling, fixing, retrofitting tires for semis, tractors, industrial equipment. So their service area has to be wide open and have enormous doors.

In collaboration with Butler Manufacturing, Carden provided the space they needed with a combination of Butler's Landmark 2000 and wide span structural systems, designed to Jennings Tire's specifications. And to counter-act so many large doors, Carden incorporated Butler's insulated standing seam roof system and thermal wall panels to improve the energy efficiency.

"I think their workmanship is good - they gave us a good product." - Owner H.B. Willis
