

Lebanon Fire Station

Lebanon, Tennessee

Rather than using a strict low-bid selection process, the City of Lebanon awarded Carden Company this project based on our prior experience and success with complex projects.

It was indeed complicated. Not only did the City want to add a brand new fire station, they also wanted to completely renovate and upgrade their headquarters station – but they needed to keep it in operation throughout the construction process. That meant allowing the men and trucks the sufficient space to live and work. It also meant taking great care to keep their communications system up and running.

“They were good about keeping me up-to-date on things, and when there were problems, they got with us early enough to figure out a solution – and they’d come up with options to choose from!”
- Fire Chief Wayne Driver.
