

## **Local Government Data Processing Corporation**

Columbia, Tennessee

A non-profit organization, this data processing center needed a simple, functional, budget-friendly building for their activities.

We normally use Butler products for manufacturing and warehouse/distribution type operations, but with the needs of this client, a Butler Manufacturing pre-engineered system was a perfect choice. The pre-engineered components, including their MR24 roof system, ensured a quality, low-maintenance building that could be constructed quicker and cheaper than conventional construction.
