

American Freightways Terminal

Nashville, Tennessee

Transforming a rocky, 15-acre site into American Freightways' Nashville operations center was a big job. We poured over 1200 truckloads of concrete, installed an 18,000 gallon underground storage tank, and erected 3 buildings.

The 3 very different buildings: a 78-door trucking terminal, a two-story administration center and a full-service truck maintenance facility, were all constructed from Butler Manufacturing's pre-engineered components. Designed to the owner specifications, these high-quality components are durable and especially cost-effective for spaces this size.
