

Improving Education.

For the construction of the A. Z. Kelley Elementary School in Antioch, a few extra weeks to finish things up was not an option – the first day of school is *not* a flexible deadline.

So despite a delayed start, Carden Company made it possible for the doors of the new school to open right on time.

A large project on a very tight schedule required extraordinary organization and management.

Though the A. Z. Kelley job was awarded in July, Carden Company couldn't begin work until October, due to a rock site that slowed down construction of the building pad. But the deadline for completion was still mid-August the following year.

At 75,000 square feet – complete with classrooms, offices and gymnasium – the school was a very large project to complete in just nine months. It was the kind of construction job that required aggressive time management.

As with any project on such a tight schedule, ordinary problems can pose special challenges. Quick reactions to difficulties or change orders required the efficient cooperation of suppliers, sub-contractors – and the Metropolitan School Board.

The final product was a spacious new school for a growing community. It was a challenging project for all concerned, but Bob Heffington, who oversees construction of Metro schools, said the relationship with Carden Company was a positive one and was happy with their work.

When your project is challenging, call Carden.

Carden Company delivers innovative solutions, impressive quality and exceptional service.
